

# Think Energy

There are 4 renewable sources in this picture that are helping to power Rudolph's nose with clean energy.  
Can you spot them and do you know what they are?  
(Answers on next page)

# Think Energy

## *Rudolph the Renewable-Nosed Reindeer*

*Have you ever wondered or do you suppose  
How Rudolph the Reindeer got his shiny red nose?  
Well long before he became a celebrity,  
Rudolph was in charge of Santa's electricity.*

*The rest of the reindeer, they laughed and they snorted,  
But Rudolph was clever and had the energy bills sorted.  
He switched off the lights and insulated the walls,  
He even put a smart meter out in the hall.*

*With a twitch of his antlers and a stamp of his hoof,  
Rudolph had solar panels up on the roof.  
But with the other reindeer he made no alliances,  
As he went about switching off all the appliances.*

*But then came the fog upon Christmas Eve,  
And there was a panic like you wouldn't believe.  
Santa watched with a look of dismay,  
At the sack full of toys piled up in the sleigh.*

*But along came Rudolph, the star of the hour,  
Who charged up the sleigh using clean electric power,  
And to make sure their journey was safe and was viewable,  
He lit up his nose from the power of renewables.*

*And now every year around Christmas time,  
Please think of Rudolph and this energy rhyme,  
Just turn off a light, plug out a gadget,  
It's better for you, for me and the planet.*

Answers:

1. Biomass 2. Wind Energy 3. Solar Energy 4. Geothermal Energy
