Better Retrofits, Together

Citizen-led renovation

codema.ie/BetterRetrofits

Your path to community-led home energy upgrades

A **community-led initiative** helping you and your neighbours **navigate home energy upgrades together** through a **Buying Club model**, from your first expression of interest right through to signing with a Sustainable Energy Authority of Ireland (SEAI)-registered contractor.

A buying club is how we bring your interest together with your neighbours', so we can approach SEAI-registered contractors with real, collective demand.

How it works - four simple steps

1 Express your interest

Filling out the form doesn't commit you to anything.
It's how we find out what your home - and your neighbours' homes - need, so we can bring real, collective demand to contractors. Scan the QR code on the next page to get started.

2 Get informed at workshops

Make decisions with confidence, not uncertainty.
We'll run free learning workshops to help you understand which upgrades are right for your home (such as solar, insulation, etc.), along with the grants available.

3 Join forces with neighbours

Moving forward as one.
By pooling demand across your community every six months, we give SEAI-registered contractors better-quality leads and give you transparent guide prices and options to compare.

4 Your home, your contract

You're always in control, right to the very end.
The contractor will complete a technical survey and a proposal showing a quoted price for your retrofit. If you proceed, the contract for works is directly between you and your contractor.

Citizen-led renovation

Why join the Buying Club?

Confidence, support and knowledge – tackle upgrades together with your neighbours, not alone.

Free workshops to help inform you and clarify what's right for your home and budget.

Independent and not-for-profit – co-delivered by Codema, Dublin's Energy Agency and the SEAI Sustainable Energy Communities (SEC) programme.

Genuinely free to join – money only changes hands between you and your chosen contractor, if you decide to go ahead.

No penalty to leave – step away at any point before signing with a contractor.

Total flexibility – from a single measure like insulation or solar, to a full deep retrofit.

A rolling six-month cycle – if you're not ready this time, there's always a next opportunity.

The payoff: a warmer, more comfortable home with a better Building Energy Rating and more manageable energy bills.

Ready to get started?

Joining is free, easy and doesn't commit you to anything.
